

NEWSFLASH

DOD EMALL August 2009

No. 2009-02

This DOD EMALL Newsflash is intended to notify the user community of the latest DOD EMALL releases, enhancements, news and information.

8.1.4 Release July 19, 2009

- DOD EMALL version 8.1.4 is now live with new site enhancements and features. A new session timeout count down is visible next to the account name, and in the lower bar of the browser window. It counts down from 45 minutes and a warning will pop up to alert the user that their session will soon expire in two minutes if session is not continued. The website has also been reorganized slightly to provide additional workspace and an enhanced view. For example, the General Information sidebar was removed and the General Information links can now be found at the bottom of each screen in the website footer.
- There is a new access to the Weapon System Support Program (WSSP) Application which allows customers to initiate WS1 transactions.
- The Navy Long Term Housing (NLTH) application was also improved. Now NLTH orders are sent to Electronic Document Access (EDA) allowing all parties to view the contracts and orders, as well as to submit invoices through its interface with Wide Area Workflow.

PKI Enforcement and CAC / ECA Requirements Extended

- DOD EMALL became CAC Enabled on 26 April 2009 allowing user access to a DOD EMALL account with a Common Access Card (CAC) or a DOD-approved PKI External Certificate Authority (ECA) digital certificate. CAC Enforcement has been extended to 01 February 2010 in lieu of the previous 01 August 2009 date. Existing customers must obtain either a CAC or ECA card by 01 February 2010 to continue using DOD EMALL. New customers must obtain a CAC or ECA card prior to registering.
- Customers not eligible for a CAC must obtain a Hardware Assurance Smart Card Certificate. Browser-based certificates will not be permitted. The Hardware assurance solution will require a Smart Card, a Smart Card Reader and Authentication software. Please note: when ordering a certificate it is possible to request a "Medium assurance token" and that the token be placed on a smart card. The companies below will be able to provide information on how to obtain a smart card reader and authentication software.
- The companies below are DLA authorized and can provide the Hardware Assurance solution:
 - IdenTrust, Inc.
Email: helpdesk@identrust.com
Web: <http://www.identrust.com>
Phone: 888-882-1104
